

**Become a Certified Paraoptometric Assistant (CPOA)
with Kaiser Permanente's Optometry Department
in the Northwest region**

We have an amazing new opportunity available at Kaiser Permanente for Medical Assistants interested in expanding their scope into specialty care. KPNW's Optometry Department is offering a career pathway to Medical Assistants (experienced and new grads) to work alongside Optometrists after completing a training program. You would be responsible for patient work ups, diagnostic testing, and assisting in follow up care as a Certified Para-Optometric Assistant (CPOA).

The twelve-week program is hosted by our Eye Care Support Coordinator. The first six weeks are spent learning about eye anatomy, refractive error, and disease & treatments then applying those skills to patient work ups and diagnostic testing. The second six weeks are spent in clinic with a mentor who helps apply the skills learned to a real-world Optometry practice. At the end of two years with the department you will be required to become a Certified Pare-Optometric Assistant.

The training program is located at 10200 SE Sunnyside Rd, Clackamas, OR 97015
